Millions of Americans changed their racial or ethnic identity from one census to the next

The Pew Research Center released a study last week on how millions of people have changed their racial or ethnic identity from one census to the next. The study found that millions of people changed their racial identity from one census to the next, with Hispanics being the most common group to change.

The study, titled "Race and Hispanic Origin: An Analysis of Intermarriage and Intergenerational Changes in the Hispanic Population," found that 25% of Hispanics changed their racial identity from one census to the next. The study also found that the Hispanic population has grown dramatically in the past decade, with Hispanics now making up 18% of the U.S. population.

The study found that Hispanics are more likely to change their racial identity than any other group, with the Hispanic population doubling in size since the 2000 census. The study also found that Hispanics are more likely to change their identity than any other group, with the Hispanic population doubling in size since the 2000 census.
